

Code Roll workflow

We use git tags that are versioned using the date of the roll.

List the existing tags to see if one has been created yet today. If so, increment by .1, starting with .1

```
$: git tag
```

```
0.0.1
```

```
2015-12-21
```

```
2015-12-23
```

```
2015-12-24
```

```
2015-12-24.1
```

Create the release branch

```
$: git flow release start 2015-12-29
```

Since we don't have a stage site you can immediately close the release branch

```
$: git flow release finish 2015-12-29
```

For the tag message I like to list the tickets included in the roll

Now push everything up

```
$: git push --all
```

```
$: git push --tags
```

ssh in to server

```
$ cd /var/www/vhosts2/migrate.kboo.fm
```

```
$ git fetch
```

```
$ git checkout 2015-12-29
```

```
$ exit
```

then run Drupal update db (if needed) and clear cache

```
$: drush @kboo.d7.prod updatedb
```

```
$: drush @kboo.d7.prod cc all
```
