Developer documentation

Server info

New ServerPronto info

Automated daily database backups are in /home/kboo/db-backup

Production site files at /var/www/vhosts2/migrate.kboo.fm

old.kboo.org (old d6 site) is at /var/www/vhosts/backup.kboo.fm/d6

Drush aliases are set up on the rose.kboo.fm server for root and kboo users

<?php

```
$aliases['kboo.d7.dev'] = array(
'site' => 'kboo',
'env' => 'dev',
'root' => '/var/www/vhosts/dev.kboo.fm/web',
'uri' => 'http://xdev.kboo.fm',
);

$aliases['kboo.d7.prod'] = array(
'site' => 'kboo',
'env' => 'prod',
'root' => '/var/www/vhosts2/migrate.kboo.fm/web',
'uri' => 'http://kboo.fm',
);
```

Heads up

Cloudlfare limits file uploads to 100MB (unless KBOO upgrades to a more expensive plan). So, while fields might indicate a large file upload is permitted, it is not and unexpected ajax errors occurs when larger file uploads are attempted.

As of May 2016 KBOO has stopped using Cloudflare on the site.

Pro Tip: If you have to restore the dB, make sure to temporarily disable the cron job that backs it up. Else this may occur: If you have to reinstall MySQL and set up empty databases to import all my backups into. Then the script will fire and overwrite backups with the empties.
