Automated episodes

An episode refers to a station_content node with field_station_content_type equal to 'Episode'.

Module

radio_station

Content type: station_content (relevant fields)

field_station_content_type - taxonomy reference, term of 'Episode'

field_air_time - begin/end datetime

field_produced_for - program for the episode

field_episode_recording - 3 choices
   Do not record this program
   Record for two-week archive (5 hour block)
   Record for permanent archive (can not contain royalty music!)

field_audio_files - ripped mp3 file

Cron

the class RadioStation implements

function getRippingEpisodes($stream, $count)
This gets the schedule for the next 25 hours.

For each schedule item it will create a new episode node if it does not yet exist.
   Therefore, to override an episode simply create it enough time in advance.

An array of episodes (whether newly created or not) is returned.
